## Eleonore JV Au project

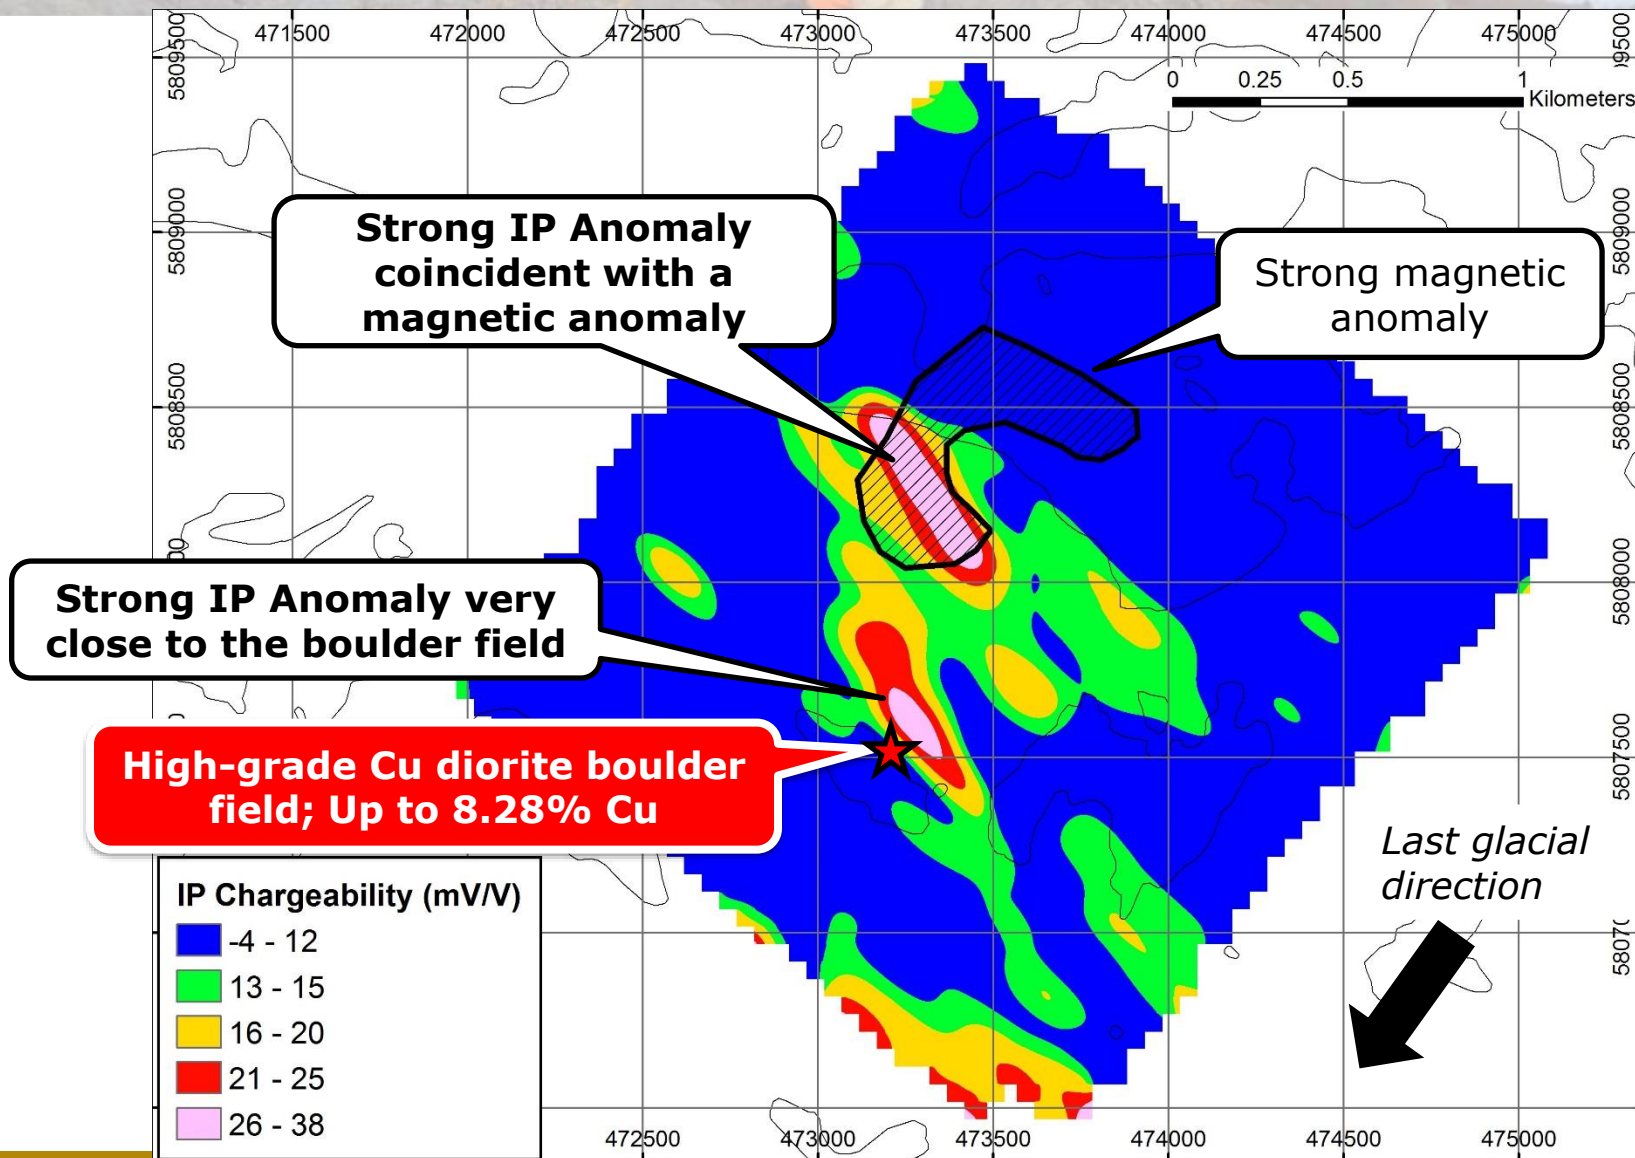

*June 2021*

# Midland – Osisko JV Location

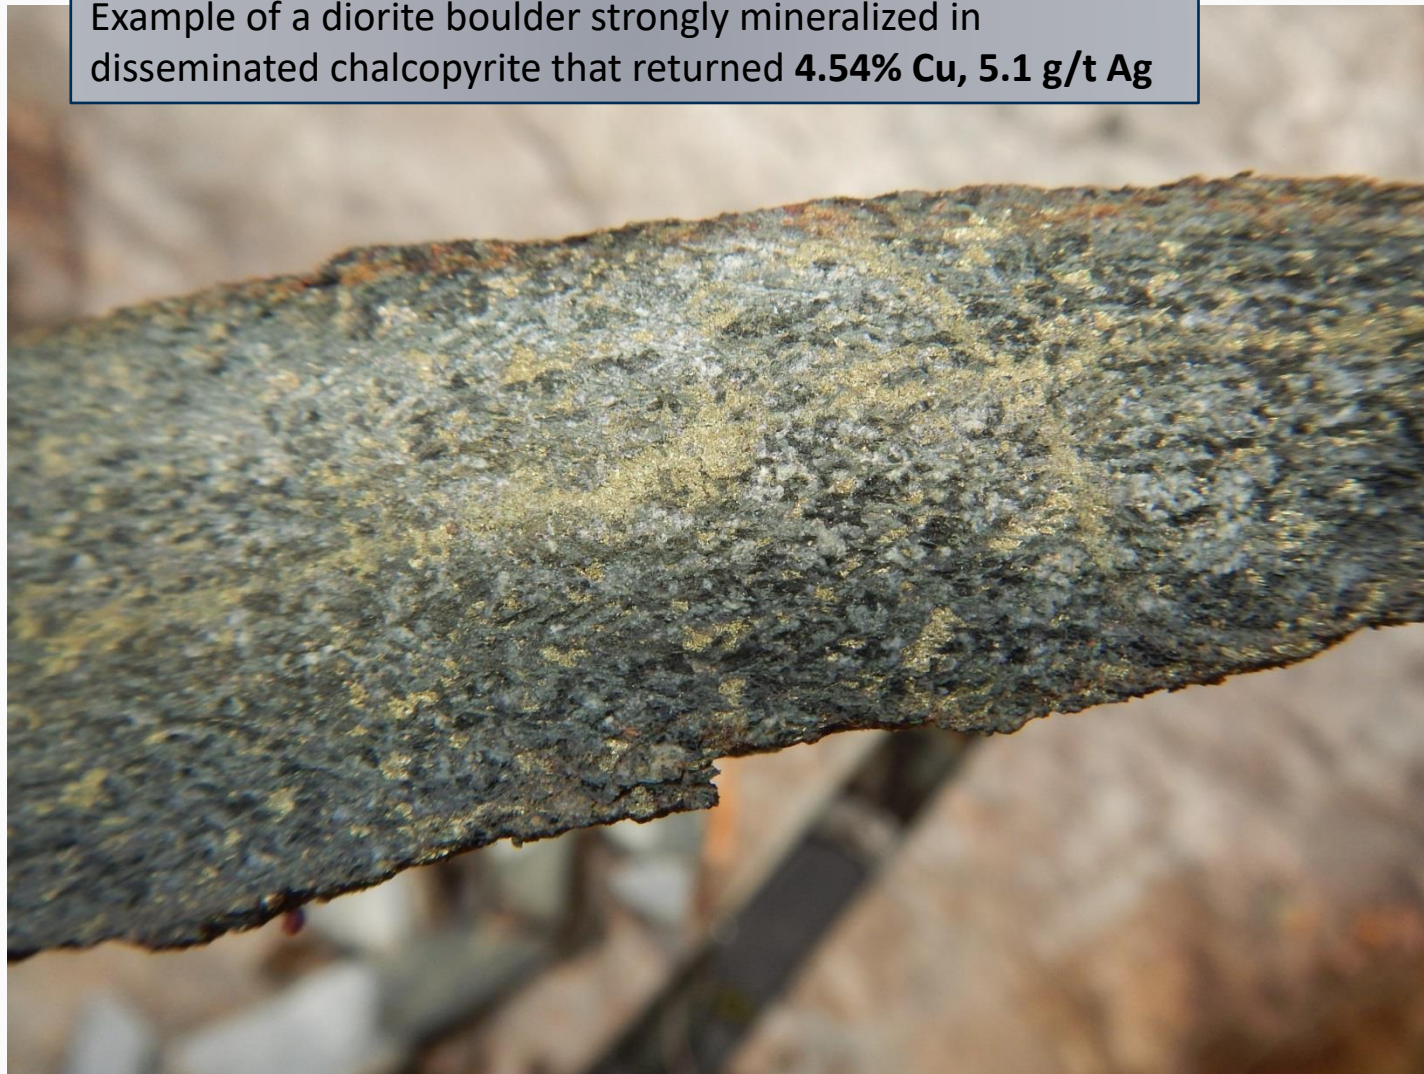

# Diorite Boulders Strongly Mineralized in Copper

Example of a diorite boulder strongly mineralized in disseminated chalcopyrite that returned **4.54% Cu, 5.1 g/t Ag**

# Midland - Osisko JV – Highlights

- Strategic alliance covering a large, mostly unexplored segment of the La Grande / Opinaca subprovinces boundary – Host to the world-class Eleonore gold mine, as well as the Cheechoo gold project
- Discovery of a high-grade Cu-Ag boulder field, up to 8.28 % Cu, in the southern part of the project, also suggesting a strong potential for porphyry-style mineralization in addition to orogenic / intrusion-related gold. IP anomalies associated with the boulder field
- Numerous gold anomalies in paragneisses at the La Grande – Opinaca contact
- Sharing of expertise and databases
