

James Bay: Main Lithium Prospects and Midland Projects

James Bay Geology – Midland Projects

Galinée: Lithium Potential

- Midland's Galinée project is located approximately **4 kilometres east of Adina new discovery**
- Located at the **contact** between **amphibolites** of the Trieste Formation to the south and **felsic intrusives** to the north
- This major structure that most likely controlled the emplacement of pegmatites on the Adina showing, is present on **Midland's Galinée property over more than 7 kilometres**
